

CBSE Class 12 Pe — Children and Women in Sports

50 Most-Probable PYQs & Board-Pattern Practice Questions

1-Mark (MCQ/Assertion-Reason/VSA)

- Q1.** Which one of the following is not a component of the female athlete triad? (A) Amenorrhoea (B) Eating disorder (C) Obesity (D) Osteoporosis [PYQ 2024] | Confidence: Very High
- Q2.** Menarche is defined as the: (A) Ending of menstrual period of women (B) Beginning of menstrual period in women (C) Time of pregnancy (D) Missing of menstrual cycle [PYQ 2024] | Confidence: Very High
- Q3.** Which of the following postural deformities is characterised by a wide gap between the knees when standing with feet together? (A) Knock Knees (B) Bow Legs (C) Flat Foot (D) Lordosis [PYQ 2024] | Confidence: Very High
- Q4.** Kyphosis is commonly referred to as which of the following? (A) Hollow back (B) Hunchback (C) Sideways bending (D) Lordosis [PYQ] | Confidence: Very High
- Q5.** Amenorrhea is a medical condition categorized as a: (A) Menstrual Disorder (B) Eating Disorder (C) Psychological disorder (D) Postural deformity [PYQ] | Confidence: Very High
- Q6.** Which of the following deformities is NOT related to the lower extremities (legs)? (A) Knock-Knee (B) Scoliosis (C) Bow-legs (D) Flat-foot [PYQ] | Confidence: High
- Q7.** Match the following: List I (Deformity) | List II (Characteristic)
I. Knock Knee | 1. Increased exaggeration of backward curve
II. Kyphosis | 2. Wide gap between the knees when standing
III. Lordosis | 3. Knees touch each other in normal standing position
IV. Bow legs | 4. Inward curvature of the spine
(A) I-3, II-1, III-4, IV-2 (B) I-1, II-3, III-4, IV-2 (C) I-4, II-2, III-1, IV-3 (D) I-2, II-3, III-4, IV-1 [PYQ 2024] | Confidence: Very High
- Q8.** Fine motor development in children is primarily related to the coordination of: (A) Large muscles (B) Arm muscles (C) Small muscles (like hands and fingers) (D) Leg muscles [PYQ] | Confidence: Medium
- Q9.** According to the World Health Organization (WHO), what is the recommended minimum duration of moderate-to-vigorous physical activity for children aged 5-17 years? (A) 30 minutes a day (B) 60 minutes a day (C) 90 minutes a day (D) 150 minutes a week [Practice] | Confidence: High
- Q10.** Given below are two statements labeled Assertion (A) and Reason (R):
Assertion (A): Anorexia Nervosa is an eating disorder characterized by extreme food restriction.
Reason (R): Anorexia Nervosa is one of the three core components of the Female Athlete Triad.
(A) Both (A) and (R) are true and (R) is the correct explanation of (A). (B) Both (A) and (R) are true, but

(R) is not the correct explanation of (A). (C) (A) is true, but (R) is false. (D) (A) is false, but (R) is true. [Practice] | Confidence: High

Q11. The postural deformity characterized by an abnormal lateral (sideways) curvature of the spine, usually forming a "C" or "S" shape, is known as: (A) Kyphosis (B) Lordosis (C) Scoliosis (D) Flat Foot [PYQ] | Confidence: Very High

Q12. In which year did women first officially participate in the Olympic Games? (A) 1896 (B) 1900 (C) 1924 (D) 1948 [PYQ] | Confidence: Medium

Q13. Which essential mineral's deficiency primarily leads to Osteoporosis (low bone mineral density) in female athletes? (A) Iron (B) Potassium (C) Calcium (D) Sodium [Practice] | Confidence: Very High

Q14. What does the term "Genu Valgum" medically refer to? (A) Bow Legs (B) Flat Foot (C) Knock Knees (D) Round Shoulders [Practice] | Confidence: High

Q15. The absence or cessation of the menstrual cycle for more than three months in female athletes is clinically termed as: (A) Menarche (B) Dysmenorrhea (C) Amenorrhea (D) Osteoporosis [PYQ] | Confidence: Very High

Q16. Bending the head backward in a standing position is a corrective measure that helps in getting rid of: (A) Lordosis (B) Kyphosis (C) Scoliosis (D) Flat foot [PYQ] | Confidence: High

Q17. Eating disorders in the Female Athlete Triad primarily include: (A) Anorexia Nervosa and Bulimia Nervosa (B) Dysmenorrhea and Amenorrhea (C) Osteoporosis and Lordosis (D) Obesity and Diabetes [Practice] | Confidence: Very High

Q18. Given below are two statements labeled Assertion (A) and Reason (R): Assertion (A): Women's participation in professional sports in India has historically been lower than men's. Reason (R): Lack of safe sports infrastructure, societal stereotypes, and poor media coverage act as major hurdles for female athletes. (A) Both (A) and (R) are true and (R) is the correct explanation of (A). (B) Both (A) and (R) are true, but (R) is not the correct explanation of (A). (C) (A) is true, but (R) is false. (D) (A) is false, but (R) is true. [Practice] | Confidence: High

Q19. Flat foot deformity can be identified if a person's footprint shows: (A) Only the heel and toes (B) A complete impression of the entire sole with no arch (C) A very high arch (D) Only the outer edge of the foot [Practice] | Confidence: Medium

Q20. Which of the following is an effective corrective yoga asana for Lordosis? (A) Halasana (B) Chakrasana (C) Dhanurasana (D) Bhujangasana [Practice] | Confidence: High

2-Mark

Q21. What do you mean by 'round shoulders'? Suggest any two exercises as corrective measures. [PYQ] | Confidence: Very High

Q22. Define the 'Female Athlete Triad' and name its three main components. [PYQ] | Confidence: Very High

- Q23.** Suggest any two corrective measures for Bow Legs. [PYQ] | Confidence: High
- Q24.** Differentiate between gross and fine motor skills. [PYQ 2018] | Confidence: Medium
- Q25.** What is Menstrual Dysfunction? Mention any one major cause of it in female athletes. [PYQ] | Confidence: High
- Q26.** State any two common causes of 'Lordosis'. [Practice] | Confidence: High
- Q27.** Briefly explain the term 'Menarche'. How is it different from Amenorrhea? [PYQ] | Confidence: Very High
- Q28.** Suggest any two physical activities as corrective measures for 'Flat Foot'. [PYQ] | Confidence: High
- Q29.** What are the WHO physical activity guidelines for adults aged 18-64 years? [Practice] | Confidence: Medium
- Q30.** Enlist any two major causes of Osteoporosis in women. [Practice] | Confidence: Very High
- Q31.** Define 'Bulimia Nervosa' as an eating disorder among female athletes. [Practice] | Confidence: High
- Q32.** Mention any two psychological benefits of women participating in sports. [PYQ] | Confidence: High
-

3-Mark

- Q33.** Describe the physical and psychological benefits of women's participation in sports. [PYQ] | Confidence: Very High
- Q34.** Discuss the symptoms, causes, and corrective measures of flat feet. [PYQ] | Confidence: Very High
- Q35.** What is Scoliosis? Mention its causes and suggest two corrective exercises to rectify this deformity. [PYQ] | Confidence: High
- Q36.** Elaborate on the various types of disorders/problems related to menstrual dysfunction in female athletes. [PYQ] | Confidence: High
- Q37.** Explain the exercise guidelines recommended by the WHO for children and adolescents (5-17 years of age). [Practice] | Confidence: Very High
- Q38.** What do you understand by 'Knock Knees' (Genu Valgum)? Suggest three corrective exercises for this deformity. [PYQ] | Confidence: Very High
- Q39.** Explain the factors affecting motor development in children. [PYQ] | Confidence: Medium
- Q40.** Despite immense potential, women's participation in sports faces hurdles. Highlight any three effective strategies to enhance women's participation in sports in India. [Practice] | Confidence: High

Q41. Differentiate between Kyphosis and Lordosis. Provide one corrective measure for each.

[PYQ] | Confidence: Very High

Q42. Explain how extreme physical training and severe dieting can lead to the 'Female Athlete Triad'. [Practice] | Confidence: High

5-Mark (Long Answer/Case-Study)

Q43. Discuss the 'Female Athlete Triad' in detail. Explain its three components (Osteoporosis, Amenorrhea, and Eating Disorders) and suggest preventive measures. [PYQ] | Confidence: Very High

Q44. What are Postural Deformities? Explain any four common spinal and leg deformities (such as Kyphosis, Lordosis, Knock Knees, or Bow Legs) along with their respective corrective physical activities. [PYQ] | Confidence: Very High

Q45. Case Study: Sheethal spent her weekend checking the health status of all the security guards of her huge gated community as a part of project work assigned by her PE teacher. She found out that more than half of them have shown a significant deformity in the upper part of their vertebral column, causing a hunched appearance. (i) The term used to define this specific deformity is __. **(ii) This deformity is mainly caused due to __. (iii) Name one yoga asana which helps in rectifying such a condition. (iv) Bending the head backward in a standing position helps in getting rid of __.** [PYQ 2024] | Confidence: Very High

Q46. Case Study: Mahesh, a Physical Education teacher at XYZ School, observed that Raju, a student of class VI, has an exaggerated outward curve of the vertebral column at the Thoracic region. He suggested some exercises to rectify this problem. (i) What is this deformity known as? (ii) This deformity is commonly known as __ back. (iii) This deformity is related to which specific part of the body? (iv) Suggest any one physical exercise to correct this condition. [PYQ] | Confidence: High

Q47. Case Study: Padma, a student of class XII, used to read books in the school library. One day she was studying the history of women's participation in Indian Sports and felt that more girls and women must be encouraged to actively participate in sports. She believed that impossible things can be achieved through participating in sports. (i) In which year did women first participate in the Olympics? (ii) Amenorrhea is a condition related to ____. (iii) State any one psychological benefit of women's participation in sports. (iv) What is the "Female Athlete Triad"? [PYQ] | Confidence: High

Q48. Physical activity is essential for healthy human development across the lifespan. Discuss in detail the Physical Exercise Guidelines recommended by the World Health Organization (WHO) for the age group of **5-17 years** and the age group of **65 years and above**. [Practice] | Confidence: Very High

Q49. Case Study: During a routine posture-check camp, a physical education teacher notices that several girls in Class 11 have an exaggerated inward curvature of the lower spine (lumbar region), which causes their stomach to protrude forward. Many of them complain of

severe lower back pain after standing for long periods. (i) Identify the specific spinal postural deformity the girls are suffering from. (ii) Name the postural deformity that is the exact opposite of this condition (characterized by an outward curve/hunchback). (iii) Suggest any one corrective physical exercise or yoga asana that the teacher should recommend to treat this specific lower back condition. (iv) Mention one major cause of this specific deformity.

[Practice] | Confidence: High

Q50. Define Menarche and Menstrual Dysfunction. Detail the various physiological and environmental factors that contribute to menstrual dysfunction in female athletes. How can proper nutrition help manage these issues? [PYQ] | Confidence: Very High

Answer Key

Q1. (C) Obesity (The triad consists of Osteoporosis, Amenorrhea, and Eating disorders). **Q2.** (B) Beginning of menstrual period in women. **Q3.** (B) Bow Legs (Genu Varum). **Q4.** (B) Hunchback. **Q5.** (A) Menstrual Disorder (absence of periods). **Q6.** (B) Scoliosis (It is a spinal deformity, not a lower extremity deformity). **Q7.** (A) I-3, II-1, III-4, IV-2 (Knock Knees: Knees touch. Kyphosis: Backward curve. Lordosis: Inward curve. Bow Legs: Wide gap). **Q8.** (C) Small muscles (like hands and fingers). **Q9.** (B) 60 minutes a day. **Q10.** (B) Both (A) and (R) are true, but (R) is not the correct explanation of (A) (They are true statements but one does not scientifically explain the other in this context). **Q11.** (C) Scoliosis. **Q12.** (B) 1900 (Paris Olympics). **Q13.** (C) Calcium. **Q14.** (C) Knock Knees. **Q15.** (C) Amenorrhea. **Q16.** (B) Kyphosis. **Q17.** (A) Anorexia Nervosa and Bulimia Nervosa. **Q18.** (A) Both (A) and (R) are true and (R) is the correct explanation of (A). **Q19.** (B) A complete impression of the entire sole with no arch. **Q20.** (A) Halasana (Forward bending exercises help reduce the inward lumbar curve). **Q21.** Round shoulders is a postural deformity where the shoulders are drawn forward, the head is extended, and the chin points forward. Corrective exercises: Chakrasana, Dhanurasana, holding a horizontal bar. **Q22.** Female Athlete Triad is a syndrome comprising three interrelated conditions affecting female athletes: 1. Osteoporosis (low bone density), 2. Amenorrhea (menstrual dysfunction), and 3. Eating Disorders (Anorexia/Bulimia). **Q23.** Corrective measures for Bow Legs: Walking on the inner edge of the feet, walking with toes pointed inward (pigeon-toed), or wearing modified shoes/braces. **Q24.** Gross motor skills involve large muscle movements (e.g., running, jumping). Fine motor skills involve small muscle movements requiring precision (e.g., catching a ball, holding a pen). **Q25.** Menstrual dysfunction is an abnormal menstrual cycle (irregular, extremely heavy, or absent periods). Cause: Intense physical stress/overtraining, extreme dieting, or hormonal imbalance. **Q26.** Causes of Lordosis: Obesity, weak abdominal muscles, carrying heavy loads, or congenital defects. **Q27.** Menarche is the first menstrual cycle in a female's life. Amenorrhea is the abnormal absence of menstruation for three or more months. **Q28.** Corrective measures for Flat foot: Walking on heels and toes, skipping rope, and picking up marbles with toes. **Q29.** WHO guidelines for 18-64 years: At least 150–300 minutes of moderate-intensity aerobic physical activity throughout the week, plus muscle-strengthening activities on 2 or more

days. **Q30.** 1. Insufficient calcium and Vitamin D in the diet. 2. Low estrogen levels (often due to amenorrhea). **Q31.** Bulimia Nervosa is an eating disorder characterized by a cycle of binge eating (consuming large amounts of food) followed by extreme purging (e.g., vomiting or using laxatives) to avoid weight gain. **Q32.** 1. Builds self-esteem and confidence. 2. Reduces stress, anxiety, and depression. **Q33.** Physical benefits: Enhances cardiovascular fitness, strengthens bones (prevents osteoporosis), controls obesity. Psychological benefits: Reduces stress, improves mood, builds self-esteem and leadership qualities. **Q34.** Symptoms: Entire sole touches the ground; pain in feet. Causes: Weak muscles, obesity, unscientific shoes. Corrective measures: Skipping, walking on toes/heels, picking up pebbles with toes. **Q35.** Scoliosis is a lateral (sideways) "C" or "S" shaped curvature of the spine. Causes: Congenital defects, carrying heavy bags on one shoulder, weak muscles. Corrective exercises: Hanging on a horizontal bar, Trikonasana, Tarasana. **Q36.** Disorders include: Primary Amenorrhea (menarche delayed beyond 15 years), Secondary Amenorrhea (periods stop for 3+ months), Oligomenorrhea (infrequent periods), Dysmenorrhea (severe menstrual cramps). **Q37.** WHO guidelines (5-17 yrs): At least 60 minutes of moderate-to-vigorous physical activity daily. Should include activities that strengthen muscle and bone at least 3 times a week. Limit sedentary screen time. **Q38.** Knock Knees (Genu Valgum) is when knees touch each other in a normal standing posture while feet remain apart. Corrective: Horse-riding, keeping a pillow between knees while standing/sleeping, Padmasana. **Q39.** Factors affecting motor development: 1. Heredity (genes). 2. Nutrition (balanced diet). 3. Environment (opportunities to play). 4. Physical activity & training. 5. Immunization & disease. **Q40.** Strategies: 1. Ensure safe and accessible sports infrastructure for women. 2. Provide financial support, scholarships, and career opportunities. 3. Change societal attitudes through media campaigns highlighting female role models. **Q41.** Kyphosis is an exaggerated backward/outward curve of the thoracic spine (hunchback); Corrective: Chakrasana. Lordosis is an exaggerated inward curve of the lumbar spine (hollow back); Corrective: Halasana/forward bending. **Q42.** Extreme training increases caloric expenditure, and severe dieting restricts caloric intake. This energy deficit leads to eating disorders. The low energy stops the menstrual cycle (Amenorrhea), which drops estrogen levels, subsequently weakening bones (Osteoporosis). **Q43.** The Triad is a combination of three conditions. 1. Eating Disorders: Anorexia (starving) and Bulimia (binge/purge) due to body image pressure. 2. Amenorrhea: Absence of menses due to low energy/high stress. 3. Osteoporosis: Weak bones due to low calcium and estrogen. Prevention: Balanced diet, healthy body weight, avoiding overtraining. **Q44.** Postural deformities are unnatural deviations in the skeletal alignment. 1. Kyphosis (hunchback) -> Corrected by Chakrasana. 2. Lordosis (inward curve) -> Corrected by Paschimottanasana. 3. Knock Knees (knees touch) -> Corrected by Padmasana/pillow between knees. 4. Bow Legs (knees wide apart) -> Corrected by walking on the inner edge of feet. **Q45.** (i) Kyphosis. (ii) Carrying heavy loads/weak muscles. (iii) Chakrasana / Dhanurasana. (iv) Kyphosis. **Q46.** (i) Kyphosis. (ii) Hunchback. (iii) Vertebral column (spine). (iv) Dhanurasana or Chakrasana. **Q47.** (i) 1900 (Paris). (ii) Menstrual Disorder (absence of periods). (iii) Boosts self-confidence / relieves stress. (iv) A syndrome of Osteoporosis, Amenorrhea, and Eating disorders. **Q48.** 5-17 years: 60 mins/day of moderate-

to-vigorous aerobic activity; muscle/bone strengthening 3 times/week. 65+ years: 150–300 mins/week of moderate aerobic activity; balance and strength training 3 or more days/week to prevent falls. **Q49.** (i) Lordosis. (ii) Kyphosis. (iii) Halasana or Paschimottanasana (forward bending). (iv) Obesity or weak abdominal muscles. **Q50.** Menarche: The first menstrual cycle. Menstrual dysfunction: Abnormalities in the cycle (irregularity, heavy bleeding, extreme pain). Factors: High-intensity athletic training, poor diet (caloric deficit), psychological stress, and low body fat percentage. Proper nutrition (caloric balance, calcium, iron) restores hormonal balance and normalizes the cycle.

CBSE Class 12 (2027) — Chapterwise PYQ Bank. Compiled from past board papers + board-pattern practice questions (clearly labelled).
