

CBSE Class 12 Pe — Yoga as Preventive Measure for Lifestyle Disease

50 Most-Probable PYQs & Board-Pattern Practice Questions

1-Mark (MCQ/Assertion-Reason/VSA)

Q1. As per the prescribed syllabus, Suryabhedan Pranayama is recommended for the treatment of: (A) Obesity (B) Hypertension (C) Asthma (D) Back pain [PYQ] | Confidence: Very High

Q2. Which of the following asanas is famously known as the "Cobra Pose"? (A) Chakrasana (B) Dhanurasana (C) Halasana (D) Bhujangasana [PYQ 2024] | Confidence: Very High

Q3. Gagan wants to prevent himself from asthma and hypertension. Identify the combination of asanas to prevent him from these lifestyle diseases. (A) Uttan Mandukasana, Vakrasana (B) Supta Vajrasana, Vakrasana (C) Chakrasana, Uttan Mandukasana (D) Vakrasana, Chakrasana [PYQ 2024] | Confidence: Very High

Q4. Which of the following asanas is performed in a sitting posture and is highly beneficial for curing Obesity? (A) Tadasana (B) Vajrasana (C) Halasana (D) Shavasana [PYQ] | Confidence: Very High

Q5. Normal Blood pressure in a healthy adult is ____: (A) 120/80 mmHg (B) 140/90 mmHg (C) 80/100 mmHg (D) 100/80 mmHg [PYQ] | Confidence: Very High

Q6. Blood sugar levels are controlled by which hormone in the human body? (A) Thyroxin (B) Insulin (C) Pituitary (D) Progesterone [PYQ] | Confidence: Very High

Q7. The disease of the lung where airways are blocked, narrowed, and produce extra mucus is: (A) Diabetes (B) Asthma (C) Obesity (D) Hypertension [PYQ] | Confidence: Very High

Q8. Geetha's 14-year-old daughter has a short height. Which yoga asana is best advised to help increase her height? (A) Tadasana (B) Bhujangasana (C) Sukhasana (D) Both a & b [PYQ] | Confidence: High

Q9. The word 'Yoga' is derived from the Sanskrit root word: (A) Yug (B) Yuj (C) Yog (D) Yanj [Practice] | Confidence: Medium

Q10. Which of the following asanas is translated as the "Cow Face Pose"? (A) Gomukhasana (B) Bhadrasana (C) Mandukasana (D) Makarasana [Practice] | Confidence: High

Q11. Assertion (A): The risk of hypertension can be significantly reduced by regularly practicing Shavasana. Reason (R): Shavasana is a meditative resting pose that calms the central nervous system and relieves physical and mental stress. (A) Both (A) and (R) are true and (R) is the correct explanation of (A). (B) Both (A) and (R) are true, but (R) is not the correct

explanation of (A). (C) (A) is true, but (R) is false. (D) (A) is false, but (R) is true. [Practice] | Confidence: Very High

Q12. Which amongst these is NOT used to prevent or cure Diabetes? (A) Bhujangasana (B) Ardha Matsyendrasana (C) Supta Vajrasana (D) Halasana [Practice] | Confidence: High

Q13. Match the following asanas to the disease they primarily prevent: 1. Obesity -> i. Vakrasana 2. Diabetes -> ii. Tadasana 3. Asthma -> iii. Ardha Matsyendrasana 4. Hypertension -> iv. Trikonasana (A) 1-iv, 2-iii, 3-ii, 4-i (B) 1-ii, 2-iii, 3-iv, 4-i (C) 1-iii, 2-iv, 3-i, 4-ii (D) 1-iv, 2-ii, 3-iii, 4-i [PYQ 2024] | Confidence: High

Q14. Which of the following asanas is performed in a prone (lying on the stomach) position? (A) Makarasana (B) Halasana (C) Vajrasana (D) Tadasana [PYQ] | Confidence: Very High

Q15. The BMI (Body Mass Index) index for an Obese person is: (A) < 18.5 (B) $18.5 - 24.9$ (C) > 30 (D) $25 - 29.9$ [PYQ] | Confidence: Very High

Q16. Assertion (A): Kapalabhati is highly recommended as a safe breathing exercise for individuals suffering from severe hypertension. Reason (R): Kapalabhati involves rapid and forceful exhalations which can temporarily spike blood pressure levels. (A) Both (A) and (R) are true and (R) is the correct explanation of (A). (B) Both (A) and (R) are true, but (R) is not the correct explanation of (A). (C) (A) is true, but (R) is false. (D) (A) is false, but (R) is true. [Practice] | Confidence: Medium

Q17. Bending the head backward in a standing position (like in Urdhwahastottanasana) helps in preventing which respiratory issue? (A) Diabetes (B) Back Pain (C) Asthma (D) Obesity [Practice] | Confidence: High

Q18. Which of the following asanas translates to the "Frog Pose"? (A) Ushtrasana (B) Mandukasana (C) Shalabhasana (D) Garudasana [PYQ 2024] | Confidence: High

Q19. Which lifestyle disease is characterized by an increase in body weight by 20% or more above the ideal weight due to excessive fat accumulation? (A) Hypertension (B) Diabetes (C) Obesity (D) Asthma [Practice] | Confidence: Very High

Q20. Define 'Asana'. [PYQ] | Confidence: High

2-Mark

Q21. Write any two benefits of Vajrasana in obesity. [PYQ] | Confidence: Very High

Q22. Explain the benefits of Pawanmuktasana. [PYQ] | Confidence: High

Q23. Write any four benefits of Nadi-Shodhan Pranayama. [PYQ 2024] | Confidence: Very High

Q24. Mention any two contraindications (who should avoid it) of performing Halasana. [Practice] | Confidence: Medium

Q25. State any two health benefits of practicing *Sarala Matsyasana*. [Practice] | Confidence: Medium

Q26. What do you understand by Diabetes? Mention its main physiological cause. [PYQ] | Confidence: High

Q27. Mention the contraindications of Bhujangasana. [PYQ] | Confidence: Very High

Q28. How does Kapalabhati help in managing diabetes? [Practice] | Confidence: High

Q29. Suggest any two asanas for a person suffering from both hypertension and obesity. [Practice] | Confidence: Medium

Q30. State the primary benefits of Paschimottanasana. [PYQ] | Confidence: High

Q31. Enlist any four asanas recommended in the syllabus for the prevention of back pain. [PYQ] | Confidence: Very High

Q32. What is the literal meaning of 'Pawanmuktasana' and what is its primary focus on the digestive system? [Practice] | Confidence: Medium

3-Mark

Q33. What is the role of asanas in preventing common lifestyle diseases? [PYQ] | Confidence: Very High

Q34. Explain the methods/asanas to prevent asthma. [PYQ] | Confidence: High

Q35. Describe the procedure of Tadasana for back pain. [PYQ] | Confidence: High

Q36. Explain the benefits and contraindications of Vakrasana. [PYQ] | Confidence: Very High

Q37. Discuss any two benefits and the procedure of Paschimottanasana. [PYQ] | Confidence: High

Q38. Elaborate on the procedure and benefits of Ardha Matsyendrasana. [PYQ] | Confidence: Very High

Q39. How is Yoga helpful in managing Obesity? State the procedure of any one asana used for it. [Practice] | Confidence: High

Q40. Discuss the procedure and contraindications of Chakrasana. [PYQ] | Confidence: Medium

Q41. Explain the procedure of Pawanmuktasana. [PYQ] | Confidence: High

Q42. What is hypertension? Name the asanas used for its prevention and briefly explain the benefits of Shavasana. [Practice] | Confidence: Very High

5-Mark (Long Answer/Case-Study)

Q43. List down any four asanas used for the prevention of asthma. Explain the procedure for administration of any one of them with the help of a stick diagram. [PYQ] | Confidence: Very High

Q44. Describe the procedure and benefits of Mandukasana and Makarasana to control hypertension. [PYQ 2024] | Confidence: Very High

Q45. List down any four asanas used for prevention of Hypertension. Explain the procedure and contraindication of any one of them with the help of a stick diagram. [PYQ] | Confidence: Very High

Q46. What is Obesity? Enlist the asanas for obesity. Explain the procedure, benefits, and contraindications of Bhujangasana. [PYQ 2024] | Confidence: Very High

Q47. What is Back Pain? Enlist any four yoga asanas recommended in the syllabus for the prevention and management of back pain. Thoroughly describe the step-by-step procedure, two health benefits, and two contraindications of Bhadrasana. [Practice] | Confidence: High

Q48. Case Study: Raman is a student of class VIII and is suffering from Obesity. During a recent medical check-up at school, he was advised to practice yoga and participate in sports activities for curing it. He consulted the yoga instructor at the school for further guidance. (i) The yoga instructor at the school has asked Raman to perform ___. (a) Bhujangasana (b) Pawanmuktasana (c) Vajrasana (d) Chakrasana (ii) The BMI index for an Obese person is ___. (a) < 18.5 (b) $18.5 - 24.9$ (c) > 30 (d) > 25 (iii) Name one lifestyle disease that often accompanies severe obesity. (iv) Which standing asana can Raman perform to improve his posture and reduce fat? [PYQ] | Confidence: Very High

Q49. Case Study: Mr. Shyam aged 50 years is recommended to practice specific yoga asanas as a therapeutic measure. He is a software engineer by occupation and spends a lot of time sitting at one place. He developed certain symptoms like frequent urge for urination, tiredness, excessive weight gain along with being anxious and gets easily irritated. (i) Mr. Shyam is primarily diagnosed with ___. **(a) Only Diabetes (b) Both Diabetes & Hypertension (c) Only hypertension (d) Asthma** (ii) **Blood sugar levels are controlled by** ___ hormone. (a) Thyroxin (b) Insulin (c) Pituitary (d) Progesterone (iii) Normal Blood pressure in an adult is ___. (a) 120/80 mmHg (b) 140/90 mmHg (c) 80/100 mmHg (d) 100/80 mmHg (iv) Name any one asana that Mr. Shyam should practice to specifically stimulate his pancreas. [PYQ] | Confidence: Very High

Q50. Case Study: Neeti along with her father was regular at District Park in the early morning. She realized that most of the children playing there were obese and struggling for breath after running short distances. She discussed with her physical education teacher and the Principal of the school, who decided to organize a Yoga awareness rally for the neighborhood. (i) Obesity often leads to which other physical issues? (a) Underweight (b) Diabetes (c) Back pain (d) Both b & c (ii) Which of the following Asana (posture) is NOT used for curing obesity? (a) Ardhamatsyendrasana (b) Vajrasana (c) Parvatasana (d) Trikonasana (iii) Which asana is widely used for curing obesity and can be done immediately after eating? (iv) The breathing issue the children faced while running is often related to the narrowing of airways. What is this disease called? [PYQ] | Confidence: High

Answer Key

Q1. (A) Obesity **Q2.** (D) Bhujangasana **Q3.** (D) Vakrasana, Chakrasana **Q4.** (B) Vajrasana **Q5.** (A) 120/80 mmHg **Q6.** (B) Insulin **Q7.** (B) Asthma **Q8.** (A) Tadasana **Q9.** (B) Yuj **Q10.** (A) Gomukhasana **Q11.** (A) Both (A) and (R) are true and (R) is the correct explanation of (A). **Q12.** (D) Halasana **Q13.** (A) 1-iv, 2-iii, 3-ii, 4-i **Q14.** (A) Makarasana **Q15.** (C) > 30 **Q16.** (D) (A) is false, but (R) is true (Rapid exhalations raise BP, dangerous for severe hypertension). **Q17.** (C) Asthma **Q18.** (B) Mandukasana **Q19.** (C) Obesity **Q20.** Asana refers to a physical posture or position in which a person sits or stands to improve physical/mental health. **Q21.** 1. It helps to prevent acidity and ulcers by improving digestion. 2. It relieves severe lower back problems/sciatica. **Q22.** 1. Improves digestion and removes constipation. 2. Reduces belly fat and strengthens lower back muscles. **Q23.** 1. Reduces stress/anxiety. 2. Improves concentration. 3. Balances the nervous system. 4. Enhances respiratory efficiency. **Q24.** Should be avoided by people suffering from severe back pain/slipped disc, and those with high blood pressure. **Q25.** 1. Strengthens the neck and chest muscles. 2. Improves respiratory function and helps manage asthma. **Q26.** Diabetes is a metabolic disease causing high blood sugar. Main cause: Inability of the pancreas to produce enough insulin or cells not responding to insulin. **Q27.** Avoid during pregnancy, recent abdominal surgeries, hernia, and severe spinal injuries. **Q28.** Kapalabhati involves forceful exhalations that act as an abdominal massage, stimulating the pancreas to release insulin and controlling blood sugar. **Q29.** Tadasana, Pawanmuktasana. **Q30.** 1. Removes constipation and digestive disorders. 2. Stretches hamstrings and reduces anxiety. **Q31.** Tadasana, Bhujangasana, Vakrasana, Shalabhasana. **Q32.** 'Pawan' means wind, 'Mukta' means release. It focuses on releasing trapped gas from the digestive tract and relieving flatulence. **Q33.** Asanas restore the body's natural balance. They massage internal organs, improve blood circulation, reduce stress, manage weight, and stimulate endocrine glands (like the pancreas for diabetes or thyroid for metabolism), preventing lifestyle diseases. **Q34.** Asthma causes airway inflammation. Asanas that open the chest and lungs prevent it. Examples: Tadasana, Chakrasana, Gomukhasana, Bhujangasana, Matsyasana. **Q35.** Stand straight, feet together. Interlock fingers, turn palms upward. Inhale, raise arms over the head, and lift heels, balancing on toes. Stretch the whole body upwards. Exhale and return. **Q36.** Benefits: Improves spinal flexibility, stimulates the pancreas (good for diabetes), reduces belly fat. Contraindications: Avoid during severe back pain, hernia, or recent abdominal surgery. **Q37.** Benefits: Stretches hamstrings, relieves digestive issues. Procedure: Sit with legs straight. Inhale, raise arms. Exhale, bend forward from hips, catch toes, and touch head to knees without bending knees. **Q38.** Procedure: Sit with legs extended. Bend left knee, place left foot flat outside the right knee. Bend right leg, bringing heel to the left hip. Twist torso to the left, look over left shoulder. Benefits: Cures diabetes by stimulating the pancreas, improves spinal flexibility. **Q39.** Yoga increases metabolism, burns fat, and reduces stress-eating. Procedure (Trikonasana): Stand with feet apart, raise arms sideways. Bend to the right, touch right foot with right hand, left arm pointing up. Look at left hand. Repeat on the other side. **Q40.** Procedure: Lie on back, bend knees, feet flat. Place hands near ears, fingers pointing to shoulders. Inhale, lift hips, torso,

and head off the ground, forming a curve. Contraindications: High BP, heart disease, hernia.

Q41. Procedure: Lie on the back. Bend the right knee, bring it to the chest. Interlock fingers over the knee and press it down. Lift head to touch knee with nose. Exhale and release. Repeat with the other leg, then both legs together. **Q42.** Hypertension is high blood pressure. Asanas: Shavasana, Vakrasana, Makarasana. Shavasana benefits: deeply relaxes the body, calms the nervous system, normalizes the pulse, and reduces blood pressure. **Q43.** Asanas for Asthma: Gomukhasana, Chakrasana, Matsyasana, Bhujangasana. Procedure (Bhujangasana): Lie on the stomach. Place hands near shoulders. Inhale, raise the upper body (head, neck, chest) using back muscles. Hold, exhale, and return. *(Draw a simple stick figure lying face down, then arching the back up).* **Q44.** Mandukasana (Frog Pose): Kneel in Vajrasana. Make fists with thumbs inside. Place fists on the abdomen near the navel. Exhale, bend forward, pressing fists into the belly. Look straight. Makarasana (Crocodile Pose): Lie on the stomach, legs apart. Fold arms, rest head on hands. Breathe deeply. Benefits: Both deeply relax the nervous system and lower blood pressure. **Q45.** Asanas for Hypertension: Tadasana, Shavasana, Makarasana, Vakrasana. Procedure (Vakrasana): Sit with legs straight. Bend right knee, keep foot near left knee. Place right hand behind the back. Twist torso to the right, bringing left arm over the right knee to hold the right ankle. Look right. Contraindications: Spinal injuries, hernia. *(Draw a simple seated stick figure twisting).* **Q46.** Obesity is excess fat accumulation. Asanas: Tadasana, Trikonasana, Vajrasana, Dhanurasana. Procedure (Bhujangasana): Lie prone, hands near shoulders, lift chest up while inhaling. Benefits: Tones abdominal muscles, burns belly fat, improves digestion. Contraindications: Pregnancy, hernia, severe backache. **Q47.** Back Pain is chronic pain in the spinal/lumbar region. Asanas: Tadasana, Bhujangasana, Vakrasana, Bhadrasana. Procedure (Bhadrasana): Sit on the floor, join the soles of the feet together, pull heels close to the pelvis. Hold feet with hands, keep spine straight, and press knees toward the floor. Benefits: Strengthens lower back and pelvic muscles. Contraindications: Severe knee or hip injuries. **Q48.** (i) (c) Vajrasana. (ii) (c) > 30. (iii) Diabetes / Hypertension. (iv) Tadasana or Trikonasana. **Q49.** (i) (b) Both Diabetes & Hypertension. (ii) (b) Insulin. (iii) (a) 120/80 mmHg. (iv) Ardha Matsyendrasana, Mandukasana, or Supta Vajrasana. **Q50.** (i) (d) Both b & c. (ii) (c) Parvatasana (mainly for posture/respiration). (iii) Vajrasana. (iv) Asthma.
